Dictation Management

Adding Power to Your Work

Harness this workflow solution to automate your tasks from dictation to transcription. While working smarter, you will save valuable time to gain the edge you need to excel in your field. In law offices, medical facilities, or anywhere dictation is essential to communicate, the Atom™ system provides easy-to-use applications that are flexible and customizable to your needs. Use your existing network, the Internet and your PC workstations to integrate this stable and scalable solution into your infrastructure. Atom is designed with your work in mind.

Simple Dictation

With flexible recording options, you can work from anywhere, anytime you need to.

Atom supports telephone dictation, portable recorder dictation and dictation to your PC workstation. Pick the solution that best suits your work or support all three in the same system.

An array of microphones, portable recorders and other dictation accessories are available for your Atom software.

Telephone Dictation

Call the Atom system from anywhere and use the telephone to control the recorder. You may identify your dictation tasks with document types, priorities, case and patient subjects.

Portable Dictation

To be mobile with your dictation, select one of the many supported digital portable recorders to dictate. This makes the job of sending your dictation easy and automatic.

PC Dictation

If you work in front of a PC, use it to dictate. With your own microphone or with one of our specially designed dictation microphones, the software will turn your PC into your dictation device.

Monitor Progress

Atom gives you the ability to experience the process as it happens, in real-time. Watch as dictators and transcriptionists log-on to work. Keep tabs on the work, from your PC, with full control to make changes as you see fit.

Report On Success

The system will track everything that comes in, goes out and when it happened. Clear and concise reports are provided to detail totals in volume and summarize statistics including individual user performance reports, turn around time statistics and more.

Expert Workflow

Managers appreciate the intuitive software that defines how dictation tasks are assigned and in what order. Find, listen, and report on every dictation from its creation to transcription.

Safe and Secure

Define the security of who can access work and who cannot. Encryption is automatic and protects the dictations from creation to transcription. Audit logs report every access.

Data Management

Decide how long to keep your dictation files even after they are typed. Export them as industry standard audio files if you need to send them out of the system for sharing with others.

Flexible Transcription

Based upon your workflow, Atom will distribute untyped dictations to the typists you defined. Set it up, and let Atom work for you in managing transcription priorities.

Using software for the PC, with a foot pedal and headset, typist can listen to the dictations from any network or Internet connected PC using professional tools such as volume, tone and speed controls.

Dictation

Productivity

Affordable Licensing & Technically Sound

The Atom dictation solution is the best value compared to the competition. Packed with powerful features and flexible deployment, the low price delivers high functionality.

With the unique concurrent licensing of Atom, install the dictation and transcription applications wherever you need them. License only the number of simultaneous users who will use it. Now you can deploy your new solution to extend its availability to everyone in your organization.

Atom incorporates the latest in technology to provide you with a solution that will last long into the future. Atom uses an SQL database, its Windows® compatible, and has low PC requirements which means it is adaptable to all common network environments. If you wish, harness the Internet to connect your workers with simple point and click setup. Our built-in HIPAA supportive security features keep your data safe.
